

STATE: NEBRASKA

Date of Report: November 22, 2006

Nature of report (preliminary, final, advisory, executive/legislative): Final

Key recommendations: Status quo (200kbs broadband definition) is sufficient. This work was very narrow – they were evaluating whether to allow competition from public power suppliers to supply wholesale broadband over power lines (BBPL). By a slim majority, they decided not to pursue that course.

Key programs initiated: None – continue monitoring developments

Recommended appropriation: None

Web link to agency or task force: <http://www.nitc.state.ne.us/reports/bstf.html>

I've elected just to use John's format for this report – I found nothing useful for our report-writing, as their study was very narrow and completely inert. They did a fabulous job of slapping down the progressives on their task force.
